EXECUTIVE SUMMARY

The bioERGotech Foundation (Fondazione bioERGotech ETS) is an innovative foundation based in Taranto, Puglia, Italy, established on April 12, 2025, with the mission of accelerating healthcare innovation through the development of digital scientists and transforming concrete clinical needs into sustainable commercial solutions.

The Foundation operates as a participation foundation under the Third Sector Code (D.Lgs. 117/2017). It represents a unique collaborative ecosystem that brings together specialised companies, research institutes, healthcare professionals, and entrepreneurs to drive innovation in biotechnologies and digital health.

WHO WE ARE

Accelerating healthcare innovation through digital scientists, transforming concrete clinical needs into sustainable commercial solutions.

Main activities:

- **Development of biomedical technologies** for concrete healthcare problems identified with healthcare sector partners, which then become spin-offs.
- **Technology transfer** - we facilitate the clinical application of research results for the benefit of patients and the healthcare system.

STARTUP PORTFOLIO

- **OncoTarget** - oncological diagnostic screening using organoids
- **CranioTech** - detection and analysis of cranial neurophysiological parameters
- **Xperbot** - distribution of automated robotic solutions
- **Screenovus** - AI algorithms for mammographic screening

DEVELOPED PROJECTS

- **VERO** - algorithm for oncological risk assessment based on age and biomarkers
- **AI-CReI Department** - coordination of the artificial intelligence section of the Italian College of Rheumatologists
- **Scientific publications** - papers in Frontiers in Immunology and Nature Bioengineering

SCOPE AND MISSION

2.1 Dual-Purpose Organisation

bioERGotech operates with a dual mission that distinguishes it from traditional innovation structures:

1. **Focus on Healthcare Innovation:** The Foundation is committed to addressing concrete healthcare challenges that impact human health. Rather than pursuing innovation for its own sake, the organisation identifies specific clinical needs, particularly in specialised medical fields such as rheumatology, where expert knowledge can lead to solutions that impact millions of people.
2. **Developing the Digital Workforce:** The Foundation recognises that modern healthcare innovation requires a new generation of professionals. Digital scientists, who combine hardware skills with software skills, represent the future workforce capable of bridging traditional medical practice with emerging technologies.

2.2 Core Philosophy

The Foundation's approach is based on several key principles:

- **Collaborative Innovation:** Unlike traditional accelerators where innovation occurs externally, bioERGotech creates innovation within and among existing companies, fostering synergies across the healthcare value chain.
- **Build Before Sharing:** The Foundation follows the principle of "building the pie first, then sharing it." This approach ensures that innovations are developed to maturity before distribution, maximising value creation for all participants.
- **Complementary Specialisation:** Italian companies often excel in specific components but maintain separate commercial lines. bioERGotech enables these highly specialised entities to combine their know-how by leveraging existing commercial platforms, creating growth opportunities that would be difficult to achieve independently.

Framework of Innovation

3.1 Three-Phase Innovation Model

THE FOUNDATION'S INNOVATION CYCLE

From clinical intuition to market solution

STRATEGIC SUMMARY

PHASE		OBJECTIVE		PREVALENT FINANCIAL SUPPORT
IDEATION	➔	Clinical Validation	➔	Grants and Research
PRODUCTION	➔	Realisation and Enterprise	➔	Regional Incentives (NIDI/PIA)
DISTRIBUTION	➔	Commercial Sustainability	➔	Market and Private Capital

The Foundation structures innovation projects through three integrated phases, each with specific components:

Phase 1: Ideation

Key Players: Inventors and knowledge experts

Focus: Highly specific problems that experts can understand and address

Example: Medical specialties like rheumatology where specific knowledge can impact millions of people, even if not well understood by most people

Output: Validated concept with clear clinical need

Phase 2: Production

Components:

- Minimum Viable Product (MVP) development
- Economic sustainability assessment
- Production scale planning

Decision Points:

- Post-MVP feasibility assessment
- Patent consideration for feasible projects
- Company formation for promising initiatives
- Pivot or termination for non-feasible projects

Philosophy:

- Pivoting is always less costly than terminating projects altogether

Phase 3: Distribution

Focus: Bringing validated, production-ready solutions to market

Leverage: Existing commercial platforms of member companies

Result: Sustainable commercial solutions

3.2 Funding Strategy

The Foundation employs a phase-appropriate funding approach:

Ideation Phase:

- Grants for projects of interest
- Research funding opportunities

MVP to Production Phase:

- NIDI funding (Nuove Iniziative di Impresa - New Enterprise Initiatives)

- Mini-PIA regional development programs
- PIA funding (Programma di Investimento Aziendale - Business Investment Program)
- Puglia regional benefits and incentives

Distribution Phase:

- Commercial revenues
- Private investments
- Strategic partnerships

AT FIRST GLANCE

We are creating a specialized digital workforce for medicine. We build AI Scientists that analyze data in minutes instead of months, dramatically reduce human resources, and operate 24/7. They accelerate diagnosis for physicians, development for researchers, approval for pharmaceuticals, and research for hospitals.

THE ECOSYSTEM

The platform where digital scientists/agents perform tasks, share knowledge, and are utilized to address concrete clinical needs.

How it works:

1. Relevance: Identified Scientists, healthcare partners share concrete problems.
2. Development: Provides data. Scientists develop intelligent artificial solutions.
3. Access and use: No research needed. Validation and clinical testing through our network.
4. Market introduction distributed through the Agent ERGO marketplace.

bioergotech.org

✉ info@bioergotech.org

C.F. 90287640735

WHAT WE OFFER

Main activity:

- **Development of highly specialized AI Scientists** for specific healthcare problems identified with Partners. The healthcare sector needs projects that become spin-offs
- **Technology transfer:** We facilitate clinical application of research results for patient benefit and healthcare system improvement.

BENEFITS

- 1 Strategic access: establish connections with leading clinicians, hospitals, investors, and pharmaceutical companies. Participate in an ecosystem created for healthcare innovation success.
- 2 Shared infrastructure: access computing capacity, laboratory, AI development expertise, and infrastructure to accelerate development.
- 3 Rapid validation: leverage our healthcare sector network and all research resources.
- 4 Rapid validation: leverage our healthcare sector network and all research resources.

WHO CAN BECOME A PARTNER

- Biotech/healthtech startups with AI solutions for concrete clinical problems
- Hospitals and clinicians wanting access to specialized digital scientists
- Investors interested in a diversified portfolio with social impact
- Technology partners who can contribute computing power or infrastructure

3.3 Legal Framework

Patent Strategy:

- Patent assessment conducted post-MVP for feasible projects
- Decision to protect or pivot based on commercial potential

Intellectual Property Management:

IP ownership is determined on a case-by-case basis according to project characteristics:

- **Company Developed Projects:** When a project is developed primarily within a member company with minimal Foundation oversight (e.g., CranioTech Solution), the company retains IP ownership
- **Foundation Developed Projects:** IP may be held by the Foundation and licensed to companies, ensuring valuable intellectual property is preserved even if the company fails
- **Collaborative Projects:** Flexible agreements based on contribution levels and strategic considerations

Strategic Projects

4.1 Project 1: Distributed Lab

Objective: Create a platform to share existing resources among Foundation members

Benefits:

- Cost savings after initial investment
- Repopulation of company facilities relative to empty space
- Greater innovation through resource sharing
- Improved equipment utilisation rates

Estimated Cost: € 50.000

Implementation: Digital platform for booking and managing resources, allowing members to access specialised equipment and facilities across the network.

4.2 Project 2: Startup Hub

Objective: Provide a base for companies outside Taranto to establish a presence and develop prototypes

Features:

- Prime location near the train station (no car required)
- Access to the local ecosystem and experts
- Support for local economic activity
- Proximity to economic benefits such as the SEZ (Special Economic Zone)

Services:

- Prototype development facilities
- Networking opportunities
- Connection with local partners
- Administrative and legal support

Estimated Cost: € 500.000

4.3 Project 3: Production Centre

Objective: Enable scaled production of validated products

Features:

- Larger and more structured than the Startup Hub
- Shared infrastructure among partners
- Professional production capacity
- Quality control and regulatory compliance systems

Scope: Bridge the gap between prototype and commercial production, allowing member companies to scale without individual high-intensity capital investments.

Estimated Cost: € 2.500.000

4.4 Project 4: Taranto Biotech Days 2026

Objective: Annual event organised with Foundation members

Content:

- Topics aligned with members' interests
- Knowledge sharing with students and experts
- Continuation of previous successful initiatives
- Showcase of Foundation projects and results

Audience:

- Students and young researchers
- Healthcare professionals
- Industry representatives
- Investors and potential partners
- Local and regional stakeholders

Operational Activities

The bioERGOtech Foundation is built on a fundamental principle: innovation is born from collaboration, not isolation. Our community is designed as an open space where ideas, skills, and resources meet to generate solutions that no single member could develop independently

5.1 National Events

The Foundation organises and participates in high-profile national events annually, which represent strategic moments for the entire ecosystem. Events like the meeting at the Chamber of Deputies in Rome offer members unique opportunities for:

- **Direct access to decision-makers:** dialogue with policy makers and institutions
- **Qualified networking:** meetings with investors, strategic clients, and industrial partners
- **Strategic visibility:** positioning within the national innovation landscape biotech

These events act as catalysts for business opportunities, strategic collaborations, and access to new funding channels.

5.2 Local Activities: Cycle of Operational Meetings

At the local level, the Foundation structures collaboration through three types of recurring meetings that accompany projects from concept to realisation:

Project Genesis - Ideation and Development

Sessions dedicated to exploring funding opportunities and building project proposals through Grant Writers.

ReThink Lab - Evolution and Improvement

Meetings focused on optimizing existing products on the market through:

- Critical analysis of already developed solutions
- Identification of areas for improvement and strategic pivots
- Integration of clinical and market feedback
- Collaborative problem-solving sessions

Progress Radar - Monitoring and Alignment

Regular meetings to synchronise ongoing activities:

- Updates on the status of active projects
- Identification of roadblocks and need for support
- Coordination between teams and sharing of milestones
- Verification of alignment with strategic objectives

5.3 Webinars with Experts: Digital Knowledge Sharing

The Foundation organises thematic webinars with sector experts where only Foundation members can ask questions and interact. Others can only view the recordings afterwards

Why join bioERGOtech

bioERGOtech is an innovation community where specialised

Why bioERGOTECH?

An ecosystem where collaboration creates opportunity

What emerges from the community

- Shared resources among members
- Integrated complementary skills
- Collaborative clinical validation
- Access to funding and incentives
- Knowledge distributed across the ecosystem

Innovation is born where diverse skills meet
bioERGOTECH is this space

companies, researchers, clinicians, and innovators collaborate to transform concrete clinical needs into sustainable commercial solutions. The Foundation facilitates this ecosystem, where value emerges from the collaboration among participating members.

6.1 The Ecosystem of Possibilities

Joining bioERGotech means accessing an ecosystem where collaboration creates opportunities that would be difficult to achieve individually

Shared Resources in the Network

Community members make facilities, equipment, and infrastructure accessible through the Distributed Lab model. What is underutilised today becomes available tomorrow to accelerate collective innovation.

Complementary Skills

Italian companies often excel in specific components while maintaining separate commercial lines. The community allows combining specialised know-how, leveraging existing commercial platforms, and creating synergies that open new markets.

Validation Through the Clinical Network

Connections with clinics, hospitals, and research centres, built collectively by members, allow testing and validating products with real-world feedback, accelerating the path from research to market.

Collective Access to Funding

The community facilitates access to regional, national, and European funding mechanisms. Members collaborate to intercept programs such as NIDI, Mini-PIA, PIA, SEZ benefits, and innovation incentives.

Shared Knowledge

Regulatory, technical, and commercial expertise resides within the members. The Foundation coordinates this knowledge exchange, from regulatory guidance to technology transfer, from intellectual property protection to commercial strategy.

Strategic Connections

The network includes not only companies and researchers, but also investors, healthcare institutions, and industrial partners. These connections open doors that would otherwise remain closed.

6.2 Who Finds Value in This Community

Innovators with a Clinical Vision

For those developing solutions based on real healthcare needs and seeking partners for validation, development, and commercialisation.

Specialised Companies in Growth

For businesses that excel in specific areas and seek complementary skills to diversify without individual high-capital-intensity investments.

Researchers and Institutions

For those who want to see their research transform into concrete applications that benefit patients and the healthcare system.

International Partners

For organisations seeking access to the Italian and European ecosystem, territorial benefits, and a consolidated local network.

Impact Investors

For those seeking opportunities where healthcare innovation and economic sustainability meet, reducing risk through the collaborative model.

6.3 The Role of the Foundation

The bioERGotech Foundation operates as a facilitator and coordinator of the ecosystem:

- Creates and maintains connections between participating members
- Coordinates collaborative projects from concept to commercialisation
- Manages shared intellectual property according to flexible models
- Organises sharing events like the Taranto Biotech Days
- Develops and maintains shared infrastructures (Distributed Lab, Startup Hub, Production Centre)
- Represents the community to public bodies, institutions, and strategic partners
- Facilitates access to funding programs and territorial incentives

“Innovation is not born in isolation. It is born where diverse skills meet, where resources are shared, where collaboration replaces competition. bioERGotech is this space.”

Strategic Position: Taranto

7.1 Regional Context

Taranto, located in the Puglia region of Southern Italy, offers unique advantages for the Foundation's mission:

Special Economic Zone (SEZ):

- Tax benefits for companies establishing operations
- Simplified administrative procedures
- Investment incentives

Mediterranean Games 2026:

- Major infrastructure improvements
- Increased international visibility
- Improved connectivity

Industrial Heritage:

- Strong manufacturing tradition
- Skilled technical workforce
- Strategic port location

7.2 Regional Innovation Ecosystem

Puglia Regional Support:

- NIDI funding (Nuove Imprese a Tasso Zero - New Businesses at Zero Interest)
- Mini-PIA and PIA development programs
- Regional innovation grants
- University partnerships

Future Vision

8.1 Short-Term Objectives (2025-2026)

1. Complete the establishment of the Distributed Lab infrastructure
2. Launch the Startup Hub with initial tenant companies
3. Successfully host Taranto Biotech Days 2026
4. Reach 10-15 member companies across all categories
5. Advance the current portfolio projects to the MVP phase
6. Establish 2-3 clinical validation partnerships

8.2 Medium-Term Objectives (2027-2028)

1. Make the Production Centre operational
2. Generate the first spin-off companies from the Foundation's projects
3. Establish international partnerships with at least 3 foreign institutions
4. Distribute the first commercially validated solutions on the market
5. Expand the member base to 20-25 organisations
6. Secure recurring funding streams through grants

8.3 Long-Term Vision (2029 +)

1. Position Taranto as a recognised European biotech hub
2. Create a sustainable ecosystem with over 50 member organisations
3. Launch the Agent ERGO distributed marketplace platform
4. Generate significant social impact through improved healthcare solutions
5. Establish a replicable model in other regions and countries
6. Develop an international network of partner foundations

Who is bioERGotech For?

9.1 For Healthcare Innovators

If you are developing AI-based solutions for concrete clinical problems, bioERGotech provides:

- Clinical validation partnerships
- Regulatory expertise
- Production scalability capabilities
- Market access through established commercial channels
- Support in navigating funding

9.2 For Established Companies

If you are a specialised company seeking growth:

- Diversification opportunities without full independent investment
- Access to complementary skills
- Shared infrastructure that reduces capital requirements
- Improved commercial pipeline
- Access to regional and European funding

9.3 For Healthcare Institutions

If you are a hospital or clinical facility:

- Access to cutting-edge solutions for patient care
- Participation in innovation development
- Connection with digital health experts
- Research collaboration opportunities
- Translational medicine partnerships

9.4 For Investors

If you are looking for impact investment opportunities:

- Diversified portfolio in a high-growth sector
- Social impact alongside financial returns
- Reduced risk through the collaborative model
- Access to the deal flow from the Foundation's projects
- Participation in shaping the future of healthcare

Conclusion

The bioERGotech Foundation represents a pioneering approach to healthcare innovation, addressing the fundamental challenge of transforming clinical needs into sustainable commercial solutions.

By creating an ecosystem where specialized companies collaborate while maintaining their individual identities and where innovation flourishes within and across organizations rather than in isolation, bioERGotech is establishing a scalable model for the future.

The Foundation's dual mission is uniquely positioned to address both immediate clinical demands and long-term industry transformation by accelerating healthcare innovation while simultaneously training the next generation of digital health professionals. Through its structured three-phase innovation model, strategic approach to intellectual property, and comprehensive support services, bioERGotech provides a complete pathway from initial concept to commercialization.

Based in Taranto, the Foundation offers tangible advantages to both local and international members, leveraging regional development programs, Special Economic Zone (SEZ) benefits, and the infrastructure improvements driven by the 2026 Mediterranean Games. Its governance structure ensures professional management while remaining flexible and responsive to the needs of its members.

Whether you are a startup seeking support for validation and scaling, an established company looking to diversify and grow, a healthcare institution desiring access to cutting-edge innovation, or an investor searching for high-impact opportunities, bioERGotech provides a collaborative platform where building the future of healthcare becomes a shared endeavor.

The Foundation's vision is clear: to accelerate healthcare innovation through digital scientists, transform concrete clinical needs into sustainable commercial solutions, and create an ecosystem where specialized expertise converges to achieve what no single entity could accomplish alone. It is not just about building individual companies; it is about 'baking the cake' together and sharing in the success.
